

Technology, security & preparedness

Practical support for people, plans, and the systems they rely on.

Astruvia connects technology and organizational readiness. We shape each engagement around your priorities, operating environment, and the people who need to put the work into practice.

PERSONALIZED FOR YOUR ORGANIZATION

Healthcare and public health / Government / Business / Nonprofits / Education

BUILD USEFUL SYSTEMS

Technology & cybersecurity

Improve controls, collaboration, and daily operations with cybersecurity readiness and project-based technology support. Microsoft 365, SharePoint, Teams, and Power Platform; workflow automation, dashboards, and reporting; websites, portals, and web and mobile application foundations. We define scope and handoff together around your operating needs.

MAKE THE PLAN USABLE

Planning

Develop, review, and update emergency operations, continuity, and healthcare preparedness plans. Work through responsibilities, coordination, and dependencies with the people involved. Outputs can include practical guidance and priorities for sharing, maintaining, training on, and exercising the plan.

PREPARE YOUR PEOPLE

Training

Customized preparedness training, incident-command and role-based workshops, and cybersecurity learning. Content connects responsibilities, plans, and realistic decisions. We agree on objectives, format, and materials for the audience, creating room to ask questions and build understanding in a safe learning environment.

PRACTICE AND IMPROVE

Exercises

All Homeland Security Exercise and Evaluation Program (HSEEP) types: seminars, workshops, tabletop exercises, games, drills, functional exercises, and full-scale exercises. Design, delivery, and evaluation support plan validation, with virtual, in-person, or hybrid delivery suited to the activity. After-action reporting and improvement planning (AAR/IP) turn observations into practical next steps.

FOUNDER-LED. SUPPORTED BY RELEVANT EXPERTISE.

Founder Jose Lopez brings a background in public health preparedness, healthcare readiness leadership, emergency management instruction, and cybersecurity. We engage subject matter experts as needed to support realistic learning and plan validation.
